

SUBJECT: Software End of Life Notification: Junos SDK
BULLETIN NUMBER: TSB16963
BULLETIN TYPE: Product Support Notification
AFFECTED PRODUCT: Junos SDK
ISSUE DATE: July 15, 2016
REVISION: 2.0

OVERVIEW:

JET (Juniper Extension Toolkit) provides a rich set of APIs to program the Junos control plane. JET allows users to build applications on top of Junos and hence replaces the legacy Junos SDK. It is an evolution of the programmability solution to make Junos flexible and extensible. With the support of JET APIs in 16.1R1, Junos SDK is now EOL. Junos SDK will be supported as long as the equivalent Junos release is supported. So, a customer running Junos 14.2 can still download and use Junos SDK until Junos 14.2 is EOS.

JET Base Functionality: JET provides application development environment to build and package JET applications. The JET sandbox includes the required libraries, compiler, tools and utilities required for building and creating JET application packages.

JET Application Framework: JET application framework is a part of Junos (16.1R1 onwards) and provides the services for JET applications to integrate with rest of the Junos services.
